ACOUSTICAL PERFORMANCE.

ANC-66 accordion partitions are offered with three laboratory certified sound transmission class ratings of STC 38, STC 42 and STC 44. And an optional noise reduction coefficient of N.R.C .70 is available on one or both sides of STC 42 rated models. To create quiet spaces, Sonicwal partitions employ exclusive patented hinging systems that acoustically decouple the panels on one face of the partition from those on the other face. This makes possible the structural, durability and appearance advantages of rigid laminated panels while achieving high sound isolation.

ANC-66 QUALITY CONSTRUCTION

Panels are joined and edge sealed with ANC's unique dual-walled, lifetime Memory Action® vinyl hinges that acoustically dampen the panels and protect their edges from marring scrapes and blows. Top and bottom Sonicsweep seals, Ceilinguard head trim and deep nesting end posts with dual row vertical sound seals and positive latches all add to superior acoustical performance.

FUNCTIONAL ELEGANCE

The natural look of genuine wood or the attitude of color and texture are the possibilities of Sonicwal models. Panels constructed of rugged high density particleboard are machine laminated with select wood veneers, high pressure decorative laminates and textured or wood grain vinyls. A soft statement with any of 40 contemporary contract interior colors can be achieved with Ribtex® Basic wall carpeting or Woventex® or Tek-Tall® 1000 panel fabrics. Custom orders of Customer's Own Materials or wood stained finishes are also available for special situations. Memory Action® vinyl hinges may be specified to harmonize or highlight the selected panel finish. End post trim and hardware in bronze or natural finish is standard.

OPERATIONAL FEATURES

Partitions operate smoothly and quietly along overhead structural aluminum tracks. Ball-bearing wheels support the partitions at every volute. Manual operation is standard with electrical operation as an option. Curved tracks, curved and crossover switches as well as two, three and four-way meeting posts are available for multiple room arrangements. Privacy and cylinder key lock security options cylinders keyed to the building's master key system are offered. Because of its design statement and performance, ANC partitions have become the product of choice, preferred over other comparably priced accordion partitions that offer so much less.
